

Education

Milwaukee, WI	Milwaukee School of Engineering	Sept 2013 May 2017
---------------	---------------------------------	----------------------

- BS in Software Engineering.

Work Experience

Software Engineering Lead	12twenty	Sept 2024 – Sept 2025
---------------------------	----------	-----------------------

Remote

- Managed a brand new team in charge of several core components in the company's flagship product
- Worked with product managers to solidify requirements for new features and documenting existing legacy behavior
- Mentored junior developers to help improve communication and technical skills
- Created and improved existing workflows; such as rewriting snapshot testing tooling to be significantly easier to write and maintain, also improving performance and developer experience dramatically
- C#, ASP .NET, SQL, Azure, TypeScript, Angular

Senior Software Engineer	Microsoft	July 2021 – Oct 2023
--------------------------	-----------	----------------------

Remote

- Pioneered applications for Microsoft Viva Connections and pushed further requirements for Adaptive Card Extensions
- Made internal tools for Microsoft employees, such as developing campus transportation app to be used by 50k employees at Microsoft's Redmond location
- Pioneered integration of OCR + AI tooling in our existing apps
- TypeScript, C#, Adaptive Card Extensions, Azure

Software Engineer	Google	May 2019 – Nov 2020
-------------------	--------	---------------------

Sunnyvale, CA

- Data Governance team for BigQuery. Helping ensure compliance with GDPR and CCPA
- Primary developer for BigQuery Row Level Security feature; working with IAM
- Designed and advocated for user privacy and safety, keeping it a primary purpose when developing
- Java, C++, SQL, JavaScript, Python, Angular, Google Cloud

Software Engineer	Brady Corporation	Aug 2017 – May 2019
-------------------	-------------------	---------------------

Milwaukee, WI

- Improved upon inspection management software, worked directly with onsite inspector to optimize their workflow and used their input to write and prioritize user stories
- Created microservices in Azure using WebApps and spearheaded the transition to Azure Functions to reduce costs thousands of dollars a month
- Contributed on both web app to allow easy management of scheduling inspections and mobile app for easy onsite inspection with phone or tablet
- Standardized API design pattern for the entire platform
- ASP .NET, C#, TypeScript, React, Cordova, Azure, CosmosDB, Azure Functions, WPF

Skills

- Programming Languages: C#, TypeScript, SQL, Rust, Java, C++, Python, etc...
- Development Experience: Cloud, Web, Mobile, Desktop, Scripting/Command Line Utilities
- Special Interests: Security, Privacy, Cloud Architecture, Developer Experience and Tools, FOSS

Projects

- **Smart Console** (<https://github.com/Awkewainze/SmartConsole>) A touchscreen based IOT app that shows basic information about local devices and current conditions, including current time, weather, ability to control lights, and see moisture level of houseplants using moisture sensors. Raspberry Pi, React, TypeScript
- **Friendbot** (<https://github.com/Awkewainze/FriendBot>) A simple, silly Discord.js chatbot used for fun activities on my friend group chat server. I also used it as a way to teach friends how to code and also play with implementing different design patterns; adding dependency injection, permission system, etc... TypeScript
- **Various Hardware Projects** s I have been making it a goal in recent months to learn more about understanding more about the hardware world. In school I was only taught very briefly about the lower levels of computers, so I am working on filling in my own gaps of knowledge. I have learned how to solder and put together a simple ESP board controlled traffic light for my roommates to see my current status (home, do not disturb, away) Arduino, Raspberry Pi, Soldering
